

上智大学数学談話会のお知らせ

日時： 2013年7月19日（金曜）17:00-18:00

場所： 四谷キャンパス 3-571B室

講演者： Andrew Booker 氏 (RIMS/Bristol Univ.)

講演題目： Alan Turing and the Riemann hypothesis

アブストラクト：

Many mathematicians are familiar with Alan Turing as a logician, pioneer of computer science, and code-breaker during the war. Not so many know that he was also a number theorist. I will describe Turing's interest in the Riemann hypothesis, in a manner accessible to all. (The talk will be in English with slides in Japanese.)
